

Caltech has received two Citation for Chemical Breakthrough awards, for L. Pauling's 1939 book *The Nature of the Chemical Bond* and M. Meselson and F. W. Stahl's 1958 publication on *The Replication of DNA in Escherichia Coli*. In addition, Caltech is quite proud of its long term colleague J. D. Roberts' 1953 paper with H. E. Simmons, Jr., L. A. Carlsmith and C. W. Vaughn on *Rearrangement in the Reaction of Chlorobenzene-1-C¹⁴ with Potassium Amide* published when Roberts was on the faculty of MIT. A duplicate of the Roberts/MIT plaque is also displayed at Caltech.

The plaques are displayed in the J. Holmes Sturdivant Lecture Hall in Room 153 of the Noyes Laboratory building.

From left to right: Pauling; Roberts et al.; and Meselson and Stahl.
